DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of group II, species 1 in the reply filed on 15 July 2005 is acknowledged.
2. Claims 7-9 and 24-113 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 15 July 2005.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 and 10-23 are rejected under 35 U.S.C. 103(a) as obvious over Nakajima et al, US005908347A in view of Kajiwarra et al, US006346038B1, as set forth in the Office action mailed 29 September 2005.

Response to Arguments

4. Applicant's arguments filed 22 December 2005 have been fully considered but they are not persuasive. Applicant argues that one of ordinary skill in the art would not substitute the loading/unloading cup of '038 for the carrying plate of '347, as the carrying plate carries several substrates, while the loading/unloading cup carries only

one. It is noted that applicant has claimed object relay devices that *include* a loading/unloading cup. Applicant has not limited the invention to carrying single wafers. It is the examiner's opinion that one of ordinary skill would consider it obvious to modify '347 with the loading/unloading cup of '038, as set forth in the rejection of 29 September 2005, to provide a wafer loading/unloading device which is capable of performing positioning and mounting easily and in a stable manner when attaching the wafer to the polishing head and which can receive the polished wafer in a stable manner and pass it to the next step. Further, if amended to limit the object relay devices to only one load/unload cup, the examiner considers such to be *prima facie* obvious, in that the elimination of an element and its function is obvious if that function is not desired. *In re Larson*, 340 F.2d 965, 144 USPQ 347 (CCPA 1965) (Omission of additional framework and axle which served to increase the cargo carrying capacity of prior art mobile fluid carrying unit would have been obvious if this feature was not desired.); and *In re Kuhle*, 526 F.2d 553, 188 USPQ 7 (CCPA 1975) (deleting a prior art switch member and thereby eliminating its function was an obvious expedient). Here, the elimination of structure to carry several substrates and its function in favor of structure for carrying one substrate would have been *prima facie* obvious, as the number of substrates transported is not critical to the functioning of the claimed device. Please refer to MPEP 2144.04.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
